

2)

$$\dot{m} = C \dot{p}$$

2a)

2b)

1:  $\dot{m}_1 = C_1 \dot{p}_1$

$$\frac{P_3 - P_1}{R_1} - \frac{P_1 - P_2}{R_2} = C_1 \dot{p}_1$$

$$C_1 \dot{p}_1 - \left( \frac{1}{R_1} + \frac{1}{R_2} \right) P_1 = - \left( \frac{P_3}{R_1} + \frac{P_2}{R_2} \right)$$

2:  $\dot{m}_2 = C_2 \dot{p}_2$

$$\frac{P_1 - P_2}{R_2} = C_2 \dot{p}_2$$

$$C_2 \dot{p}_2 + \frac{1}{R_2} P_2 = \frac{P_1}{R_2}$$

$$\boxed{\begin{aligned} C_1 \dot{p}_1 + \left( \frac{1}{R_1} + \frac{1}{R_2} \right) P_1 &= \frac{P_3}{R_1} + \frac{P_2}{R_2} \\ C_2 \dot{p}_2 + \frac{1}{R_2} P_2 &= \frac{P_1}{R_2} \end{aligned}}$$

3)

$$C \dot{T} = q_{in} - q_{out}$$

$$q = \frac{1}{R} dT$$

$$C_1 \dot{T}_1 = q_1 - \frac{1}{R_1} (T_1 - T_2) \rightarrow C_1 \dot{T}_1 + \frac{1}{R_1} T_1 = q_1 + \frac{1}{R_1} T_2$$

$$C_2 \dot{T}_2 = \frac{1}{R_1} (T_1 - T_2) - \frac{1}{R_2} (T_2 - T_0) \rightarrow C_2 \dot{T}_2 + (\frac{1}{R_1} + \frac{1}{R_2}) T_2 = \frac{1}{R_1} T_1 + \frac{1}{R_2} T_0$$

If  $C_2$  were a really small number, the increase in temperature  $\dot{T}_2$  would have to be really large to balance and keep equality.

4

 $T_\infty$  $\rho, \psi, c_p, A, h$ 

$$\dot{E}_{\text{sensor}} = \rho c_p \psi (T_\infty - T)$$

$$\dot{E} = -\frac{1}{\tau} (T_\infty - T)$$

$$\dot{E}_{\text{sensor}} = \dot{Q}_{\text{conv}}$$

$$\rho \psi c_p \dot{T} = h A (T_\infty - T)$$

$$\boxed{\frac{\rho \psi c_p}{h A} \dot{T} = T_\infty}$$

$$\boxed{\tau = \frac{\rho \psi c_p}{h A}}$$

5)

$$D = 25 \times 10^{-3} \text{ m}$$

$$T_S = 95^\circ \text{C}$$

$$\rho_s = 7920 \text{ kg/m}^3$$

$$c_p = 500 \text{ J/kg}\cdot^\circ\text{C}$$

$$T_A = 22^\circ \text{C}$$

$$\dot{E} = -\frac{1}{R} [T_S - T_A]$$

$$\rho c_p V \dot{T}_S = -\frac{1}{R} [T_S - T_A] ; R = \frac{1}{hA}$$

$$\rho c_p V \dot{T}_S = -hA [T_S - T_A]$$

$$h = \frac{\rho c_p V \dot{T}_S}{A [T_A - T_S]} , V = \frac{4}{3} \pi \left(\frac{D}{2}\right)^3 , A = 4\pi \left(\frac{D}{2}\right)^2$$

$$h = \frac{1}{6} \frac{\rho D^2 c_p \dot{T}_S}{[T_A - T_S]} \left| \begin{array}{l} \rho = 7920 \text{ kg/m}^3 \\ D = 25 \times 10^{-3} \text{ m} \\ c_p = 500 \text{ J/kg}\cdot^\circ\text{C} \\ \dot{T}_S = 76^\circ\text{C} \\ T_A = 22^\circ\text{C} \\ \dot{T}_S = -0.05^\circ\text{C/s} \end{array} \right.$$

$$h = \cancel{0.38} + 15.27 \frac{\text{W}}{\text{m}^2\cdot^\circ\text{C}}$$

$$\boxed{h = 15.27 \frac{\text{W}}{\text{m}^2\cdot^\circ\text{C}}}$$
